

Technical Parameters of Concrete Batching Plant

Double line of concrete mixing plant with 120 m³/h

According to the customer's request, two concrete mixing plant of the same type are placed side by side.

Two mixing plant can simultaneously work, also single work. This doesn't only improve productivity, but also prevents the impact on production caused by failure of a single device.

Double-mixing plant can make production management flexible and diverse avoiding the waste of energy brought by single mixing station.

Batching machine

Control system

Power (kw)	40	50	81.6	95	146	160	210	260	268
